Board of Trustees  
Oklahoma Public Employees Retirement System  
5801 N. Broadway Extension, Suite 200  
P.O. Box 53007  
Oklahoma City, OK 73152-3007

Members of the Board:

In this report are submitted the results of the annual valuation of the assets and liabilities of the Uniform Retirement System for Justices and Judges (URSJJ), prepared as of July 1, 2015.

The purpose of this report is to provide a summary of the funded status of the System as of July 1, 2015. While not verifying the data at the source, the actuary performed tests for consistency and reasonability. There have been no changes to the assumptions, methods or provisions since the last valuation.

The promised benefits of the System are included in the actuarially calculated contribution rates which are developed using the Entry Age Normal cost method. A five-year market related value of assets is used for actuarial valuation purposes. Gains and losses are reflected in the unfunded actuarial accrued liability (UAAL) that is being amortized by regular annual contributions as a level percentage of payroll, on the assumption that payroll will increase by 4.00% annually.

As in recent valuations, liabilities have been calculated without considering future cost of living adjustments (COLAs) in keeping with House Bill 2132 (2011).

We have prepared the Schedule of Funding Progress and Trend Information shown in the financial section of the Comprehensive Annual Financial Report. All historical information that references a valuation date prior to July 1, 2010 was prepared by the previous actuarial firm.

This is to certify that the independent consulting actuaries are members of the American Academy of Actuaries and have experience in performing valuations for public retirement systems, that the valuation was prepared in accordance with principles of practice prescribed by the Actuarial Standards Board, and that the actuarial calculations were performed by qualified actuaries in accordance with accepted actuarial procedures, based on the current provisions of the retirement system and on actuarial assumptions that are internally consistent and reasonably based on the actual experience of the System.

OPERS Board  
Page 2

Future actuarial results may differ significantly from the current results presented in this report due to factors such as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Because the potential impact of such factors is outside the scope of a normal annual actuarial valuation, an analysis of the range of results is not presented herein.

We have also reviewed the supplemental medical benefits provided by the System under Section 401(h) of the Internal Revenue Code and have determined that these benefits are subordinate to the retirement benefits as required.

In our opinion, in order for the System to meet all the benefit obligations of the plan for the current active and inactive members, contributions equal to or exceeding the actuarially determined rate are necessary. The current contribution rate is below the normal cost rate and not sustainable indefinitely. The scheduled contribution increases, however, bring the contribution rate above the normal cost rate.

The Table of Contents, which immediately follows, outlines the material contained in the report.

## EXECUTIVE SUMMARY

---

### OVERVIEW

The Uniform Retirement System for Justices and Judges (“URSJJ” or “System”) provides retirement benefits for all Justices and Judges of the Oklahoma Supreme Court, Court of Criminal Appeals, Workers’ Compensation Court, Court of Appeals, and District Courts. URSJJ is administered by the Oklahoma Public Employees Retirement System and its Board of Trustees.

This report presents the results of the July 1, 2015 actuarial valuation for the System. The primary purposes of performing an actuarial valuation are to:

- Determine the employer contribution rate required to fund the System on an actuarial basis;
- Evaluate the sufficiency of the statutory contribution rate;
- Disclose asset and liability measures as of the valuation date;
- Determine the experience of the System since the last valuation date; and
- Analyze and report on trends in System contributions, assets, and liabilities.

As was done in recent years, liabilities have been calculated without considering future cost of living adjustments due to House Bill 2132 (2011).

The valuation results provide a snapshot view of the System’s financial condition on July 1, 2015. Due to deferred asset gains that have been recognized during FY2015 and overall positive experience on System liabilities, the actuarial value of assets exceeds the actuarial accrued liability by \$29.0 million. A detailed analysis of the change in the unfunded actuarial accrued liability from July 1, 2014 to July 1, 2015 is shown on page 5.

The highlights of the valuation are shown below:

Funded Status \$(millions)	Actuarial Valuation Date	
	July 1, 2015	July, 1 2014
Actuarial Accrued Liability	\$ 266.4	\$ 258.8
Actuarial Value of Assets	\$ 295.4	\$ 274.1
Unfunded Actuarial Accrued Liability	(\$29.0)	(\$15.3)
Funded Ratio (Actuarial Value)	110.9%	105.9%
Market Value of Assets	\$ 301.3	\$ 301.5
Funded Ratio (Market Value)	113.1%	116.5%

There was a liability gain of \$4.6 million from demographic experience (1.7% of expected liability), which resulted in an actuarial accrued liability that was lower than expected. The components of this net liability gain are identified on page 5 of this report.

The estimated net return on the market value of assets was 2.7% for the year ended June 30, 2015. The actuarial value of assets is determined using a method to smooth investment gains and losses in order to develop more stable contribution rates. The return on the actuarial value of assets was approximately 11.0% which resulted in an actuarial gain of \$9.4 million.

## EXECUTIVE SUMMARY

The actuarial contribution rate for the employer decreased from 2014 to 2015:

Contribution Rate	Actuarial Valuation Date	
	July 1, 2015	July 1, 2014
Normal Cost	26.10%	26.06%
Amortization of UAAL	(8.63%)	(4.30%)
Budgeted Expenses	<u>0.54%</u>	<u>0.53%</u>
Actuarial Contribution Rate	18.01%	22.29%
<b>Less</b> Estimated Member Contribution Rate	<u>8.00%</u>	<u>8.00%</u>
Employer Actuarial Contribution Rate	10.01%	14.29%
<b>Less</b> Employer Statutory Contribution Rate	17.50%	16.00%
Contribution Shortfall/(Surplus)	(7.49%)	(1.71%)

The contribution surplus in the 2015 valuation is 7.49%, which is a significant increase from last year's contribution surplus of 1.71%. The total contribution rate for the System is 25.5% (17.5% for employer and 8.0% for employee), which is below the current normal cost rate of 26.10%. The employer statutory contribution rate is scheduled to increase each year and ultimately reach a rate of 22% in FY2019. With a contribution rate greater than the normal cost rate and a funded ratio over 100%, the Plan should remain sustainable.

### EXPERIENCE: July 1, 2014 to July 1, 2015

In many respects, an actuarial valuation can be thought of as an inventory process. The inventory is taken as of the actuarial valuation date, which for this valuation is July 1, 2015. On that date, the assets available for the payment of benefits are appraised. The assets are compared with the liabilities of the System, which are generally in excess of the assets. The actuarial process leads to a method of determining the contributions needed by members and employers in the future to balance the System assets and liabilities.

Changes in the System's assets and liabilities impacted the change in the actuarial contribution rates between July 1, 2014 and July 1, 2015. Each component is examined in the following discussion.

### ASSETS

As of July 1, 2015, the System had total funds when measured on a market value basis of \$301.3 million. This was a decrease of \$0.2 million from the July 1, 2014 figure of \$301.5 million. The market value of assets is not used directly in the calculation of the actuarial contribution rate. An asset valuation method, which smoothes the effect of market fluctuations, is used to determine the value of assets used in the valuation, called the "actuarial value of assets." Differences between the actual return on the market value of assets and the assumed return on the actuarial value of assets are phased in over a five-year period. The resulting value must be no less than 80% of the market value and no more than 120% of market value, referred to as "the corridor." See Table 3 for the detailed development of the actuarial value of assets as of July 1, 2015.

The actuarial value of assets as of July 1, 2015 was \$295.4 million. The annualized dollar-weighted rate of return for FY2015, measured on the actuarial value of assets, was approximately 11.0%, which resulted in an actuarial gain of \$9.4 million. Measured on the market value of assets, the estimated rate of return was 2.8%, net of investment expenses.

**EXECUTIVE SUMMARY**

The components of the change in the market and actuarial value of assets for the System are set forth below:

	<b>Market Value \$(millions)</b>	<b>Actuarial Value \$(millions)</b>
Net Assets, July 1, 2014	\$ 301	\$ 274
• Employer and Member Contributions	8	8
• Benefit Payments and Expenses	(16)	(16)
• Investment Income/(Loss)	8	29
Preliminary Value July 1, 2015	\$ 301	\$ 295
Application of Corridor	N/A	N/A
Final Net Assets, July 1, 2015	\$ 301	\$ 295
Estimated Rate of Return	2.7%	11.0%

Due to the use of an asset smoothing method, there is about \$5.9 million of deferred investment gain that has not yet been recognized. This deferred investment experience will be reflected in the actuarial value of assets over the next few years.

*There have been years during the last decade in which the actuarial value of assets has been higher than the market value. However, due to favorable investment experience over the most recent fiscal years, the market values have been higher than the actuarial values for the last three years.*

## EXECUTIVE SUMMARY

*Rates of return on the market value of assets are very volatile. The more stable return on the actuarial value of assets illustrates the advantage of using an asset smoothing method.*

## SYSTEM LIABILITIES

The actuarial accrued liability is that portion of the present value of future benefits that will not be paid by future normal costs. The difference between this liability and the asset value at the same date is referred to as the unfunded actuarial accrued liability (UAAL). The UAAL will be reduced if the employers' contributions exceed the employers' normal cost for the year, after allowing for interest earned on the previous years' unfunded actuarial accrued liability. Benefit improvements, experience gains/losses, and changes in the actuarial assumptions and methods will also impact the total actuarial accrued liability and the unfunded portion thereof.

The unfunded actuarial accrued liability as of July 1, 2015 is:

Actuarial Accrued Liability	\$266,400,026
Actuarial Value of Assets	<u>295,355,059</u>
Unfunded Actuarial Accrued Liability/(Surplus)	\$ (28,955,033)

See Table 5 for the detailed development of the Actuarial Accrued Liability and Table 7 for the calculation of the Unfunded Actuarial Accrued Liability.

Other factors influencing the UAAL from year to year include actual experience versus that expected based on the actuarial assumptions (both asset and liability), changes in the actuarial assumptions, procedures or methods and changes in benefit provisions. The actual experience measured in this valuation is that which occurred during the plan year ending June 30, 2015. There was an experience gain on the actuarial value of assets and an experience gain on liabilities. The total gain resulted in a \$14.0 million decrease in the UAAL.

**EXECUTIVE SUMMARY**

Between July 1, 2014 and July 1, 2015 the change in the unfunded actuarial accrued liability for the System was as follows:

	<u>\$(millions)</u>
Unfunded Actuarial Accrued Liability, July 1, 2014	(\$15.3)
· effect of contributions above than actuarial rate	(0.4)
· expected decrease due to amortization method	0.4
· investment experience	(9.4)
· liability experience <sup>1</sup>	(4.6)
· other experience	0.3
Unfunded Actuarial Accrued Liability, July 1, 2015	(\$29.0)

<sup>1</sup> Liability gain is about 1.7% of total expected actuarial accrued liability

The liability gain for the System can be allocated to the actual experience related to each actuarial assumption as follows:

<b>Liability Source</b>	<b>Impact of AAL \$(millions)</b>	<b>% of Expected Liability</b>
Salary Increases	(\$3.10)	(1.1%)
Mortality	1.44	0.5%
Termination of Employment	(0.77)	(0.3%)
Retirements	0.69	0.3%
Disability	(0.15)	(0.1%)
New Entrants and Rehires	0.11	0.0%
Miscellaneous/Data Changes	<u>(2.82)</u>	<u>(1.0%)</u>
Total (Gain)/Loss	(\$4.60)	(1.7%)

A detailed summary of the change in the UAAL is shown in Table 9.

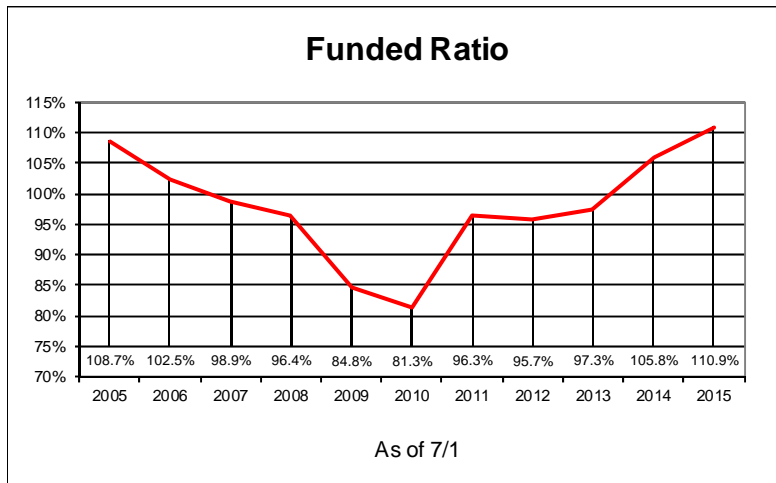

In the current valuation, the actuarial value of assets exceeds the actuarial liability. This does not mean that all future benefits are paid for; rather, it indicates that the System has accumulated more assets at this point than what is required by the funding method. The ability of the System to remain in this position will depend upon both future experience and contributions received from the plan sponsor and others.

An evaluation of the unfunded actuarial accrued liability on a pure dollar basis may not provide a complete analysis because only the difference between the assets and liabilities (which are both very large numbers) is reflected. Another way to evaluate the unfunded actuarial accrued liability and the progress made in its funding is to track the funded status, which is the ratio of the actuarial value of assets to the actuarial accrued liability. The funded status information, on both an actuarial and market value basis, is shown in the following table in \$(millions).

	7/1/2010	7/1/2011	7/1/2012	7/1/2013	7/1/2014	7/1/2015
<b>Using Actuarial Value of Assets:</b>						
Funded Ratio	81.3%	96.3%	95.7%	97.3%	105.9%	110.9%
Unfunded Actuarial Accrued Liability (UAAL)	\$53	\$9	\$11	\$7	(\$15)	(\$29)
<b>Using Market Value of Assets:</b>						
Funded Ratio	74.7%	100.6%	97.8%	103.5%	116.5%	113.1%
Unfunded Actuarial Accrued Liability (UAAL)	\$72	(\$1)	\$6	(\$9)	(\$43)	(\$35)

## EXECUTIVE SUMMARY

*At the beginning of the period shown, the funded ratio was well over 100%. Several factors contributed to the sharp decline in the funded ratio, including changes in the benefit provisions, contributions less than the actuarial rate, changes in actuarial assumptions, demographic experience, and investment experience. The increase in 2011 was due to the elimination of the COLA assumption and reserve as a result of legislation (HB 2132).*

## CONTRIBUTION RATES

The funding objective of the System is to pay the normal cost rate plus an amount that will pay off the unfunded actuarial accrued liability over a closed 20-year period commencing July 1, 2007.

Under the Entry Age Normal cost method, the actuarial contribution rate consists of:

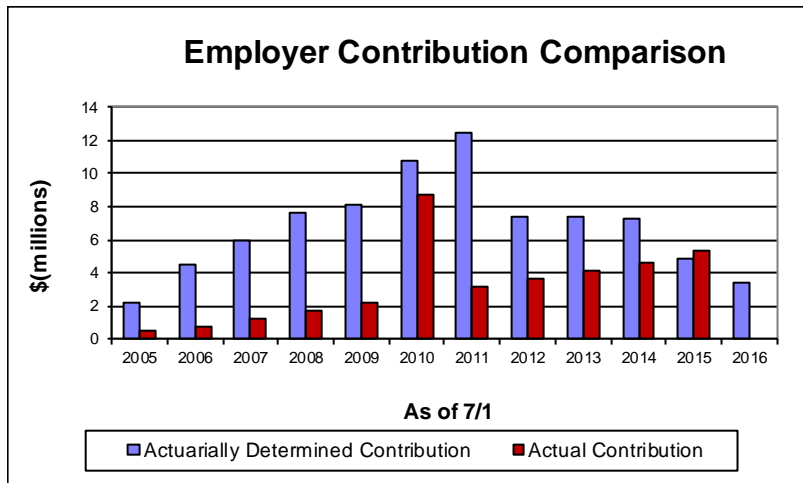

- A “normal cost” for the portion of projected liabilities allocated by the actuarial cost method to service of members during the year following the valuation date;
- An “unfunded actuarial accrued liability contribution” for the excess of the portion of projected liabilities allocated to service to date over the actuarial value of assets.

Contributions to the System are made by the members and their employers. Members pay 8.0% of compensation. The employer rate is currently 17.5% and is scheduled to increase each year until it reaches 22.0% for the fiscal year ending June 30, 2019. If all assumptions are met in future years, this contribution schedule is expected to be adequate to fund the System.

The following graph shows the total actuarially determined employer contribution compared to the amount actually received each year. The funding policy contribution equals the System’s normal cost, budgeted expenses, and an amortization of the unfunded actuarial accrued liability over a 20-year closed period beginning July 1, 2007. As of July 1, 2015, 12 years remain in the amortization period.

**EXECUTIVE SUMMARY**

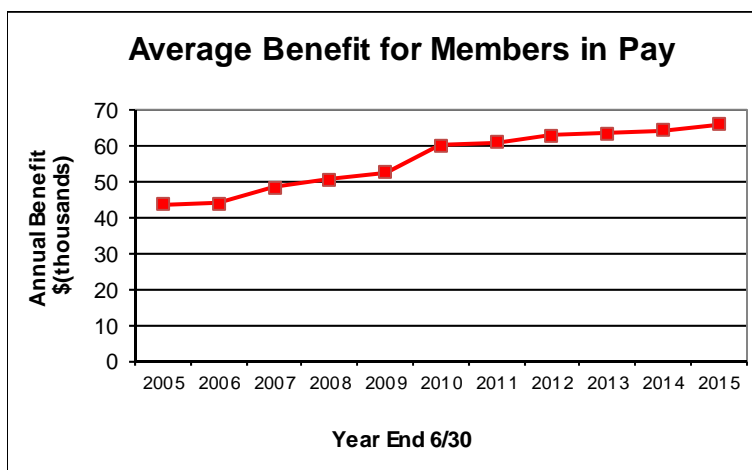

**MEMBER INFORMATION**

The number of active members decreased from 274 in the 2014 valuation to 271 in the 2015 valuation. The retired member and beneficiary count increased by 25 and the average retirement benefit amount increased. There were 260 retirees and beneficiaries in the 2015 valuation, with an average benefit of \$5,435 per month. This represents about a 3.1% increase in the average monthly benefit from the previous year.

*The number of active members has been fairly stable over this time period. The number of retirees has increased slightly, which is expected in an ongoing retirement system.*

*The average benefit for retirees has climbed steadily over the past 10 years as members retire with higher salaries and, therefore, higher benefits than those already retired. In addition, effective July 1, 2004, the maximum benefit was increased from 72.5% to 100% of pay. Ad hoc COLAs granted by the Legislature have also increased the average benefit during this period.*

**GENERAL COMMENTS**

As the graph on page 4 shows, investment experience continues to be extremely volatile which creates significant challenges when funding retirement systems. The rate of return on the market value of assets for FY 2015 was about 2.7%, while returns for the last five years have generally been above the expected rate. Because of the strong investment experience in recent years, the market value of assets exceeds the actuarial value of assets (calculated using the asset smoothing method).

Due to the asset smoothing method, the rate of return on the actuarial value of assets was 11.0%. Because this return is significantly higher than the assumed rate of return of 7.5%, there was a large actuarial gain from asset experience of \$9.4 million. There was also an experience gain of \$4.6 million on liabilities, largely due to salary experience resulting from pay that was lower than expected. With an actuarial gain of \$14.0 million, the actuarial value of assets exceeds the actuarial accrued liability in the current valuation, and there is a \$29.0 million surplus.

The unfunded actuarial accrued liability is amortized using a payment schedule that is a level percent of payroll. Because the actuarial assets now exceed the actuarial liability, the excess is amortized and provides a credit to offset the normal cost. There was also a small increase in the normal cost rate. The combined impact of these factors was a decrease of 4.28% in the actuarial contribution rate, resulting in a total actuarial contribution rate of 18.01% in the current valuation. Also, the statutory employer contribution rate increased from 16.00% to 17.50%, so there is a contribution surplus in this year's valuation of 7.49%. The total contribution rate of 25.50% remains below the normal cost of the benefits, so absent the scheduled increases, the current excess of actuarial assets over actuarial liability would be utilized to pay for this shortfall.

The funded ratio of the System improved from 105.9% to 110.9% when using the actuarial value of assets. As the deferred gains are ultimately recognized, this will improve, assuming all other assumptions are met.

Currently, the employer contribution exceeds the actuarial determined contribution rate. However, the total contribution rate (employee and employer) remains below the normal cost rate.

## SECTION 1 – SUMMARY OF FINDINGS

For convenience of reference, the principal results of the valuation and a comparison with the preceding year's results are summarized below.

### COMPARISON OF PRINCIPAL VALUATION RESULTS

	7/1/2015 Valuation	7/1/2014 Valuation	% Change
<b>1. PARTICIPANT DATA</b>			
Number of:			
Active Members	271	274	(1.1)
Retired and Disabled Members and Beneficiaries	260	235	10.6
Inactive Members	18	18	0.0
Total members	<u>549</u>	<u>527</u>	4.2
Projected Annual Salaries of Active Members	\$ 34,537,376	\$ 34,281,695	0.7
Annual Retirement Payments for Retired Members and Beneficiaries	\$ 16,958,732	\$ 14,861,872	14.1
<b>2. ASSETS AND LIABILITIES</b>			
Total Actuarial Accrued Liability	\$ 266,400,026	\$ 258,787,677	2.9
Market Value of Assets	\$ 301,296,105	\$ 301,469,209	(0.1)
Actuarial Value of Assets	\$ 295,355,061	\$ 274,070,696	7.8
Unfunded Actuarial Accrued Liability	\$ (28,955,035)	\$ (15,283,019)	89.5
Funded Ratio	110.9%	105.9%	4.7
<b>3. EMPLOYER CONTRIBUTION RATES AS A PERCENT OF PAYROLL</b>			
Normal Cost Rate	26.10%	26.06%

Contribution Shortfall/(Surplus)	(7.49%)	(1.71%)	

## Uniform Retirement System For Justices & Judges

### Market Value of Assets

The current market value represents the "snapshot" or "cash-out" value of System assets as of the valuation date. In addition, market values of assets provide the basis for measuring investment performance. As of July 1, 2015, the market value of assets for the System was \$301 million. Table 1 is a comparison, at market values, of System assets as of June 30, 2015 and June 30, 2014 in total and by investment category. Table 2 summarizes the change in the market value of assets from July 1, 2014 to June 30, 2015.

### Actuarial Value of Assets

Neither the market value of assets, representing a "cash-out" value of System assets, nor the book value of assets, representing the cost of investments, may be the best measure of the System's ongoing ability to meet its obligations.

To arrive at a suitable value for the actuarial valuation, a technique for determining the actuarial value of assets is used, which dampens swings in the market value while still indirectly recognizing market values.

The actuarial value of assets is based on a five-year moving average of expected and actual market values determined as follows:

- at the beginning of each fiscal year, a preliminary expected actuarial asset value is calculated as the sum of the previous year's actuarial value increased with a year's interest at the System's valuation rate plus net cash flow adjusted for interest (at the same rate) to the end of the previous fiscal year;
- the expected actuarial asset value is set equal to the preliminary expected actuarial value plus the unrecognized investment gains and losses as of the beginning of the previous fiscal year;
- the difference between the expected actuarial asset value and the market value is the investment gain or loss for the previous fiscal year;
- the (final) actuarial asset value is the preliminary value plus 20% of the investment gains and losses for each of the five previous fiscal years, but in no case more than 120% of the market value or less than 80% of the market value.

Table 3 shows the development of the actuarial value of assets (AVA) as of the valuation date.

### **Uniform Retirement System For Justices & Judges**

In the previous section, an actuarial valuation was compared with an inventory process, and an analysis was given of the inventory of assets of the System as of the valuation date, July 1, 2015. In this section, the discussion will focus on the commitments of the System, which are referred to as its liabilities.

Table 4 contains the actuarial present value of all future benefits (PVFB) for contributing members, inactive members, retirees and their beneficiaries.

The liabilities summarized in Table 4 include the actuarial present value of all future benefits expected to be paid with respect to each member. For an active member, this value includes measures of both benefits already earned and future benefits expected to be earned. For all members, active and retired, the value includes benefits earnable and payable for the rest of their lives and, if an optional benefit is chosen, for the lives of the surviving beneficiaries.

The actuarial assumptions used to determine liabilities are based on the results of an experience study covering the three-year period ended June 30, 2013. This set of assumptions is shown in Appendix B. The liabilities reflect the benefit structure in place as of July 1, 2015.

#### **Actuarial Liabilities**

A fundamental principle in financing the liabilities of a retirement program is that the cost of its benefits should be related to the period in which benefits are earned, rather than to the period of benefit distribution. An actuarial cost method is a mathematical technique that allocates the present value of future benefits into annual costs. In order to do this allocation, it is necessary for the funding method to “break down” the present value of future benefits into two components:

- (1) that which is attributable to the past; and
- (2) that which is attributable to the future.

Actuarial terminology calls the part attributable to the past the “past service liability” or the “actuarial accrued liability.” The portion allocated to the future is known as the “present value of future normal costs,” with the specific piece of it allocated to the current year being called the “normal cost.” Table 5 contains the calculation of actuarial liabilities for all groups.

In valuations prior to July 1, 2011, the System used an assumption of a 2% annual COLA each year in developing liabilities and contribution rates. The System did not have an automatic COLA provision, but ad hoc COLAs had historically been granted by the Legislature. The 2011 Oklahoma Legislature passed House Bill 2132 which removed COLAs from the definition of “non-fiscal retirement bills” in the Oklahoma Pension Legislation Actuarial Analysis Act (OPLAAA). The impact of this change was to make any COLA bill subject to all of the requirements of OPLAAA, including the requirement that such bills provide adequate funding to pay the cost. As a result, beginning with the July 1, 2011 actuarial valuation, the liabilities of the System have been calculated without a COLA assumption.

## **Uniform Retirement System For Justices & Judges**

In the previous two sections, attention has been focused on the assets and the liabilities (present value of future benefits) of the System. A comparison of Tables 3 and 4 indicates that there is a shortfall in current actuarial assets needed to meet the present value of all future benefits for current members and beneficiaries.

In an active system, there will always be a difference between the assets and the present value of all future benefits. An actuarial valuation determines a schedule of future contributions that will provide for this funding in an orderly fashion.

The method used to determine the incidence of the contributions in various years is called the actuarial cost method. Under an actuarial cost method, the contributions required to meet the difference between current assets and current liabilities are allocated each year between two elements: (1) the normal cost; and (2) the payment on the unfunded actuarial accrued liability.

The term “fully funded” is often applied to a system in which contributions at the normal cost rate are sufficient to pay for the benefits of existing employees as well as for those of new employees. More often than not, systems are not fully funded, either because of past benefit improvements that have not been completely funded and/or because of actuarial deficiencies that have occurred because experience has not been as favorable as anticipated under the actuarial assumptions. Under these circumstances, an unfunded actuarial accrued liability (UAAL) exists.

### **Description of Rate Components**

The actuarial cost method used by the System is the traditional Entry Age Normal (EAN) cost method as a level percent of pay. Under the EAN cost method, the actuarial present value of each member’s projected benefit is allocated on a level basis over the member’s compensation between the entry age of the member and the assumed exit age. The portion of the actuarial present value allocated to the valuation year is called the normal cost. The actuarial present value of benefits allocated to prior years of service is called the actuarial accrued liability. The unfunded actuarial accrued liability represents the difference between the actuarial accrued liability and the actuarial value of assets as of the valuation date. The unfunded actuarial accrued liability is calculated each year and reflects experience gains/losses.

Effective with the July 1, 2008 valuation, the UAAL is amortized as a level percent of payroll over a closed 20-year period commencing July 1, 2007. For July 1, 1998 and prior years, the unfunded actuarial accrued liability was amortized over 25 years from July 1, 1987. For the July 1, 1999 valuation, the amortization period was changed to 40 years from July 1, 1987. Given a stable active workforce, the level percent of payroll amortization method is expected to produce a payment stream that is constant as a percent of covered payroll.

### **Contribution Rate Summary**

The normal cost rate is developed in Table 6. Table 7 illustrates the development of the contribution rate for amortization of the unfunded actuarial accrued liability. Table 8 explains the development of the total actuarial contribution rate.

### **Uniform Retirement System For Justices & Judges**

Governmental Accounting Standards Board Statement No. 25, Financial Reporting for Defined Benefit Pension Plans as amended by GASB 50, (referred to as GASB 25), establishes financial reporting standards for defined benefit pension plans. Beginning with fiscal years ending after June 15, 2014, a new standard, GASB 67, replaces GASB 25 for Plan reporting. A separate report will provide this information.

Governmental Accounting Standards Board Statement No. 27, establishes financial reporting standards for employers of defined benefit pension plans. Beginning with fiscal years ending after June 15, 2015, a new standard, GASB 68, replaces GASB 27 for Plan reporting. A separate report will provide this information.

In this section, we provide exhibits showing the funding history, the expected benefit payments, and the present value of accumulated benefits under FASB Statement No. 35.

Table 12

### Actuarial Present Value of Accumulated Benefits

The actuarial present value of vested and nonvested accumulated benefits is computed on an ongoing System-wide basis in order to provide information on benefit liabilities calculated in accordance with Financial Accounting Standards Board Statement No. 35. In this calculation, a determination is made of all benefits earned by current participants as of the valuation date; the actuarial present value is then computed using demographic assumptions and an assumed interest rate. Assumptions regarding future salary and accrual of future benefit service are not necessary for this purpose.

	July 1	
	2015	2014
Vested benefits		
Active members	\$ 78,043,574	\$ 84,781,887
Vested terminated members	3,948,873	4,939,114
Unclaimed contributions	674,292	441,577
Retirees and beneficiaries	152,102,327	133,761,304
Supplemental medical insurance premiums	3,092,556	3,073,926
Total vested benefits	\$ 237,861,622	\$ 226,997,808
Nonvested benefits for active members	\$ 6,641,900	\$ 8,582,489
<b>Total accumulated benefits</b>	\$ 244,503,522	\$ 235,580,297
Market value of assets available for benefits	\$ 301,296,105	\$ 301,469,209
Funded ratio	123.2%	128.0%
<b>Number of members</b>		
Vested members		
Active members	155	156
Vested terminated members	18	18
Retirees and beneficiaries	260	235

## APPENDIX A – SUMMARY OF SYSTEM PROVISIONS

---

### Uniform Retirement System of Justices & Judges

Following is a summary of the major System provisions used to determine the System's financial position as of July 1, 2015.

<b>Effective date and authority</b>	<p>The System became effective January 13, 1969.</p> <p>The System is provided for under Sections 1101-1111 of Title 20 of the Oklahoma Statutes.</p>
<b>Administration</b>	<p>The State Judicial Retirement Fund is administered by the Board of Trustees of the Oklahoma Public Employees Retirement System. The Board acts as the fiduciary for investment and administration of the System.</p>
<b>Employees included</b>	<p>All justices and judges of the Supreme Court, Court of Criminal Appeals, Workers Compensation Court, Court of Appeals or District Court who serve in the State of Oklahoma participate in the Uniform Retirement System for Justices and Judges.</p>
<b>Member contributions</b>	<p>Before September 1, 2005, basic member contributions equal 5% of salary, while married members could have elected an 8% contribution rate in order to provide survivor coverage. After September 1, 2005, the member contribution rate for all members is 8% of salary.</p>
<b>Employer contributions</b>	<p>Before July 1, 1997, the fund received an amount equal to 10% of the Court Fund receipts. After July 1, 1997, employer contributions were based on members' salaries and a yearly schedule and, effective January 1 2001, were changed to 2.0% of the member's salary. Effective for the fiscal years ending June 30, 2006, employer contributions increased to 3.0% of the member's salary and will increase annually up to 22.0% for fiscal years ending June 30, 2019, and thereafter.</p>
<b>Service considered</b>	<p>Any justice or judge who becomes a member of the System when first eligible will receive credit for all years of service with the Supreme Court, Court of Criminal Appeals, Workers' Compensation Court, Court of Appeals, or a District Court of the State of Oklahoma.</p>

### **Uniform Retirement System of Justices & Judges**

<b>Compensation considered</b>	Salary received by the justice or judge while serving in the referenced courts.
<b>Final average salary</b>	The average monthly salary received during the thirty-six (36) highest months of active service as a justice or judge.
<b>Eligibility for benefits</b>	A justice or judge must complete eight (8) years of service to be eligible for any benefit from the System. A member who leaves the System, for any reason, prior to the completion of eight (8) years of service is entitled only to a return of his/her accumulated contributions without interest.
<b>Normal retirement date</b>	A member who completes eight (8) years of service and attains age sixty-five (65), or completes ten (10) years of service and attains age sixty (60), or completes eight (8) years of service and whose sum of years of service and age equals or exceeds eighty (80), may begin receiving retirement benefits at his/her request. For judges taking office after January 1, 2012, retirement age is sixty-seven (67) with eight (8) years of service or age sixty-two (62) with ten (10) years of service.
<b>Normal retirement benefit</b>	The benefit, payable monthly for the life of the member, is equal to 4% of average monthly salary multiplied by the number of years in service. In no event, however, will the benefit exceed 100% of final average salary.
<b>Disability retirement</b>	A member who completes fifteen (15) years of service, attains age fifty-five (55), and is ordered to retire by reason of disability is eligible for disability retirement benefits. The benefit, payable for life, is calculated in the same manner as a normal retirement benefit.
<b>Survivor coverage</b>	The spouse of a deceased active member who had met normal or vested retirement provisions may elect a spouse's benefit. The spouse's benefit is the benefit that would have been paid if the member had retired and elected the reduced benefit with the joint and 100% survivor option (Option B),

## Uniform Retirement System of Justices & Judges

### **Survivor coverage (continued)**

or a 50% unreduced benefit for certain married participants making 8% of pay contributions prior to September 1, 2005. Spouses of members who made the voluntary contributions prior to July 1, 1999 and die or retire after July 1, 1999 may receive up to 65% of the unreduced benefit. If the member has ten (10) years of service and the death is determined to be employment related, this benefit is payable immediately to the spouse. Otherwise, the benefit is payable to the spouse on the date the deceased member would have been eligible. This benefit is payable only to the surviving spouse of a member and they must be married ninety (90) days prior to the member's termination of employment as a justice or judge.

### **Optional forms of retirement benefits**

The Maximum Benefit is an unreduced single-life annuity with a guaranteed refund of the contribution accumulation. Three (3) other types of benefit payments are available to retiring members:

Option A – A reduced benefit with Joint and 50% Survivor annuity and a return to the unreduced amount if the joint annuitant dies.

Option B – A reduced benefit with Joint and 100% Survivor annuity and a return to the unreduced amount if the joint annuitant dies.

Original Surviving Spouse Plan – An unreduced benefit with Joint and 50% Survivor annuity available only to members who made additional voluntary survivor benefit contributions of 3% of salary prior to September 1, 2005. Spouses of members who made the voluntary contributions prior to July 1, 1999 and die or retire after July 1, 1999 may receive up to 65% of the unreduced benefit.

For married members, spousal consent is required for any option other than Option A, or a joint annuitant other than the spouse.

### **Post-retirement death benefit**

Upon the death of any retired member, a \$5,000 lump-sum death benefit will be paid to the member's beneficiary. If there is no beneficiary, then the benefit will be paid to the estate.

**Uniform Retirement System of Justices & Judges**

**Minimum benefits**

In no event will a member, or the estate of a member receive an amount or amounts less than the member's accumulated contributions without interest.

If a former member is not eligible for any other benefit from the System, the member will receive a transfer of these contributions. Similarly, if a member dies while having no spousal coverage, or upon the death of a spouse receiving survivor benefits, the member's beneficiary will receive the excess of the accumulated contributions over all benefits received by either the member, or the member and spouse combined.

**Supplemental medical insurance**

The System contributes the lesser of \$105 per month or the Medicare Supplement Premium to the Office of Management and Enterprise Services, Employees Group Insurance Division for members receiving retirement benefits.

**Expenses**

The expenses of administering the System are paid from the retirement trust fund.

## Uniform Retirement System of Justices & Judges

### Entry Age Actuarial Cost Method

Liabilities and contributions shown in this report are computed using the Individual Entry Age Level Percent of Pay actuarial cost. Sometimes called the “funding method,” this is a particular technique used by actuaries for establishing the amount of the annual actuarial cost of pension benefits, or normal cost, and the related unfunded actuarial accrued liability. Ordinarily the annual contribution to the System is comprised of (1) the normal cost, and (2) an amortization payment on the unfunded actuarial accrued liability.

Under the Entry Age Actuarial Cost method, the **Normal Cost** is computed as the level percentage of pay which, if paid from the earliest time each member would have been eligible to join the System if it then existed (thus, entry age) until his or her retirement or termination, would accumulate with interest at the rate assumed in the valuation to a fund sufficient to pay all benefits under the System.

The **Actuarial Accrued Liability** under this method, at any point in time, is the theoretical amount of the fund that would have accumulated had annual contributions equal to the normal cost been made in prior years (it does not represent the liability for benefits accrued to the valuation date). The **Unfunded Actuarial Accrued Liability** is the excess of the actuarial accrued liability over the actuarial value of System assets on the valuation date.

Under this method, experience gains or losses, i.e. decreases or increases in actuarial accrued liabilities attributable to deviations in experience from the actuarial assumptions, adjust the unfunded actuarial accrued liability.

### Asset Valuation Method

The actuarial value of assets is based on a five-year moving average of expected and actual market values determined as follows:

- at the beginning of each fiscal year, a preliminary expected actuarial asset value is calculated as the sum of the previous year’s actuarial value increased with a year’s interest at the System valuation rate plus net cash flow adjusted for interest (at the same rate) to the end of the previous fiscal year;
- the expected actuarial asset value is set equal to the preliminary expected actuarial value plus the unrecognized investment gains and losses as of the beginning of the previous fiscal year;
- the difference between the expected actuarial asset value and the market value is the investment gain or loss for the previous fiscal year;
- the (final) actuarial asset value is the preliminary value plus 20% of the investment gains and losses for each of the five (5) previous fiscal years, but in no case more than 120% of the market value or less than 80% of the market value.

## Uniform Retirement System of Justices & Judges

### Amortization Method

Effective July 1, 2008, the unfunded actuarial accrued liability is amortized as a level percent of payroll over a 20-year closed period commencing July 1, 2007. Given a stable active workforce, this amortization method is expected to produce a payment stream that is consistent as a percent of covered payroll.

### Valuation Procedures

The actuarial accrued liability held for nonvested, inactive members who have a break in service, or for nonvested members who have quit or been terminated, even if a break in service has not occurred as of the valuation date, is equal to the amount of the individual's unclaimed contributions.

The wages used to project the benefits and liabilities are actual earnings for the year ending June 30, 2015 increased by the salary scale to develop expected earnings for the current valuation year. Earnings are annualized for members with less than twelve months of reported earnings.

The calculations for the required employer contribution are determined as of mid-year. This is a reasonable estimate since contributions are made on a monthly basis throughout the year.

We did not value the 415 limit for active participants. The impact was assumed to be *de minimus*.

The compensation limitation under IRC Section 401(a)(17) is considered in this valuation.

Liability is included for members who appear to be deferred vested, but who have not yet submitted certain paperwork and therefore are not in the vested data provided. An estimated benefit was provided by the System. A corrected benefit and status will be provided by the System when the actual benefit and status have been finalized.

Members who are contributing to the System, but have not yet filled out an enrollment application, are included as active members. Where data elements are missing, reasonable estimates are used. Age is based on average entry age for other members. Gender is assigned in proportion to the overall group.

Uniform Retirement System of Justices & Judges

Economic Assumptions

<b>Investment Return:</b>	7.5% net of investment expenses per annum, compounded annually
<b>Salary Increases:</b>	5.00% per year
<b>Payroll Growth:</b>	4.0% per year
<b>Ad hoc benefit increase assumption:</b>	
<b>Monthly benefits</b>	No increases assumed
<b>Medical supplement</b>	No increases assumed
<b>Projection of 401(a)(17) compensation limit:</b>	Projected with inflation at 3.0%

Demographic Assumptions

**Retirement age:**

Active members hired before 1/1/2012

<u>Attained Age</u>	<u>Annual Rates of Retirement Per 100 Eligible Members</u>
Below 62	10
62 – 65	20
66 – 67	10

## Uniform Retirement System of Justices & Judges

**Retirement age:**  
**(continued)**

Deferred vested members

Participants with deferred benefits are assumed to commence benefits on a date provided by the System. Actives expected to terminate with a vested benefit are assumed to commence benefits at age sixty (60).

**Mortality Rates:**

Active participants and  
non-disabled pensioners

RP-2000 Combined Active/Retired Healthy Mortality Table projected to 2010 using Scale AA, setback one (1) year.

Disabled pensioners

RP-2000 Combined Active/Retired Healthy Mortality Table projected to 2010 using Scale AA set forward fourteen (14) years.

**Separation Rates:**

Separation for all reasons other  
than death

2% for all years of service prior to retirement eligibility.

**Disability Rates:**

0% for all years

**Marital Status:**

Age difference  
Percentage married

Males are assumed to be four (4) years older than spouses.  
85%

**Other Assumptions:**

Provisions for expenses

Administrative expenses, as budgeted for the Oklahoma Uniform Retirement System for Justices and Judges.

Form of payment

Active members who were contributing 8% of pay as of August 31, 2005, are assumed to retire with an unreduced benefit payable as a 50% Joint and Survivor annuity. All other members are assumed to retire with a life-only annuity.

Age

For members who have not completed the application process and are missing a date of birth, we assume they are 50 years old as of the valuation date.

Service

For members who have not completed the application process and are missing an entry date, we assume they have half a year of service as of the valuation date.

## Uniform Retirement System of Justices & Judges

### **Accrued Benefit**

The amount of an individual's benefit (whether or not vested) as of a specific date, determined in accordance with the terms of a pension plan and based on compensation and service to that date.

### **Actuarial Accrued Liability**

That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of pension plan benefits and expenses which is not provided for by future Normal Costs.

### **Actuarial Assumptions**

Assumptions as to the occurrence of future events affecting pension costs, such as: mortality, withdrawal, disablement, and retirement; changes in compensation, rates of investment earnings, and asset appreciation or depreciation; procedures used to determine the Actuarial Value of Assets; and other relevant items.

### **Actuarial Cost Method**

A procedure for determining the Actuarial Present Value of pension plan benefits and expenses and for developing an actuarially equivalent allocation of such value to time periods, usually in the form of a Normal Cost and an Actuarial Accrued Liability.

### **Actuarial Gain (Loss)**

A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions during the period between two (2) Actuarial Valuation dates, as determined in accordance with a particular Actuarial Cost Method.

### **Actuarial Present Value**

The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions.

### **Actuarial Valuation**

The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a pension plan.

### **Actuarial Value of Assets**

The value of cash, investments and other property belonging to a pension plan, as used by the actuary for the purpose of an Actuarial Valuation.

### **Actuarially Equivalent**

Of equal Actuarial Present Value, determined as of a given date with each value based on the same set of Actuarial Assumptions.

### **Amortization Payment**

That portion of the pension plan contribution which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

**Deferred Vested Participant**

A vested member who has terminated employment prior to early or normal retirement age who does not withdraw his or her contributions and is, therefore, due a retirement benefit at a later date.

**Entry Age Actuarial Cost Method**

A method under which the Actuarial Present Value of the Projected Benefits of each individual included in an Actuarial Valuation is allocated on a level basis over the earnings of the individual between entry age and assumed exit ages. The portion of this Actuarial Present Value allocated to a valuation year is called the Normal Cost. The portion of this Actuarial Present Value not provided for at a valuation date by the Actuarial Present Value of future Normal Costs is called the Actuarial Accrued Liability.

**Market Value of Assets**

The fair value of cash, investments and other property belonging to a pension plan that could be acquired by exchanging them on the open market.

**Normal Cost**

That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method Projected Benefits

**Projected Benefits**

Those pension plan benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits.

**Unaccrued Benefit**

The excess of an individual's Projected Benefits over the Accrued Benefits as of a specified date.

**Unfunded Actuarial Accrued Liability**

The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets.

**Withdrawal Liability**

The liability due to an active member terminating employment with a deferred vested benefit.
